Mandatory Community Service Project Internship of 08 weeks duration during summer vacation							

DISCRETE MATHEMATICS AND GRAPH THEORY**Course Objective**

- To impart the knowledge on mathematical and combinatorial reasoning, relations, graphs and recurrence relations.

Course Outcomes

Upon successful completion of the course, the students will be able to

- verify the validity of mathematical arguments using propositional logic, predicate logic and truth tables.
- solve various problems related to principle of inclusion and exclusion of sets, relations and functions.
- apply combinatorial principles, techniques to solve counting problems and solve problems on recurrence relations.
- demonstrate various types of graphs with applications and determine the isomorphism of graphs.
- illustrate various types of trees and determine spanning / minimal spanning trees of given graphs.

Course Content**UNIT-I: Mathematical Logic**

Propositional Calculus: Statements and Notations, Connectives, Well Formed Formulas, Truth Tables, Tautologies, Equivalence of Formulas, Duality Law, Tautological Implications, Normal Forms, Theory of Inference for Statement Calculus, Consistency of Premises, Indirect Method of Proof.

Predicate Calculus: Predicates, Predicative Logic, Statement Functions, Variables and Quantifiers, Free and Bound Variables, Inference Theory for Predicate Calculus.

UNIT-II: Set Theory

Sets: Operations on Sets, Principle of Inclusion-Exclusion.

Relations: Properties, Operations, Partition and Covering, Transitive Closure, Equivalence, Compatibility and Partial Ordering, Hasse Diagram.

Functions: Bijective, Composition, Inverse, Permutation and Recursive Functions, Lattice and its Properties.

UNIT-III: Combinatorics and Recurrence Relations

Combinatorics: Basics of Counting, Permutations, Permutations with Repetitions, Circular and Restricted Permutations, Combinations, Restricted Combinations, Binomial and Multinomial Coefficients and Theorems.

Recurrence Relations: Generating Functions, Function of Sequences, Partial Fractions, Calculating Coefficient of Generating Functions, Recurrence Relations, Formulation as Recurrence Relations, Solving Recurrence Relations by Substitution and Generating Functions, Method of Characteristic Roots, Solving Inhomogeneous Recurrence Relations.

UNIT-IV: Graph Theory

Basic Concepts, Graph Theory and its Applications, Subgraphs, Graph Representations: Adjacency and Incidence Matrices, Isomorphic Graphs, Paths and Circuits, Eulerian and Hamiltonian Graphs.

11/7/2026
 07/07/2026
 07/07/2026
 07/07/2026

UNIT-V: Multi Graphs

Multigraphs, Bipartite and Planar Graphs, Euler's Theorem, Graph Colouring and Covering, Chromatic Number, Spanning Trees, Prim's and Kruskal's Algorithms, BFS and DFS Spanning Trees.

**UNIVERSAL HUMAN VALUES – UNDERSTANDING HARMONY
AND ETHICAL HUMAN CONDUCT**

Course Objectives

1. Understand human values, self-exploration, and the importance of harmony in personal and professional life.
2. Develop ethical values and harmonious relationships with self, family, society, and nature.
3. Apply human values and professional ethics in personal, social, and professional decision-making.

Course Learning Outcomes

After successful completion of the course, students will be able to:

1. Explain the principles of human values, self-awareness, and harmonious living.
2. Analyze relationships among individuals, society, nature, and professional ethics.
3. Apply ethical values and humanistic principles in personal and professional life.

UNIT I

Introduction to Human Values

Value education, self-exploration, human aspirations, happiness and prosperity, natural acceptance, holistic development.

UNIT II

Harmony in the Human Being

Human being as self and body, needs of self and body, self-regulation, harmony, health, self-awareness.

UNIT III

Harmony in Family and Society

Family relationships, trust, respect, justice, human relationships, social harmony, universal human order.

UNIT IV

Harmony in Nature

Nature and existence, interconnectedness, mutual fulfillment, co-existence, environmental harmony, sustainable living.

UNIT V

Professional Ethics and Human Values

Human values, ethical conduct, professional ethics, humanistic education, value-based management, holistic technologies, ethical decision-making.

ARTIFICIAL INTELLIGENCE

Course Objectives

- To learn the methods of solving problems using Artificial Intelligence.
- To introduce the concepts of Expert Systems.

Course Outcomes

Upon successful completion of the course, the students will be able to

- formulate problems using Artificial Intelligence representations.
- evaluate the effectiveness of heuristic search and game playing algorithms in different domains.
- design and implement knowledge bases that combine logical, semantic, and probabilistic representations
- apply resolution and explanation-based learning techniques to derive conclusions from logical premises.
- analyze case studies of prominent expert systems like MYCIN, DART, and XCON.

Course Content

UNIT - I

Introduction: AI problems, foundation of AI and history of AI intelligent agents: Agents and Environments, the concept of rationality, the nature of environments, structure of agents, problem solving agents, problem formulation.

UNIT - II

Searching- Searching for solutions, uniformed search strategies – Breadth first search, depth first Search. Search with partial information (Heuristic search) Hill climbing, A*, AO* Algorithms, Problem reduction, Game Playing-Adversial search, Games, mini-max algorithm, optimal decisions in multiplayer games, Problem in Game playing, Alpha-Beta pruning, Evaluation functions.

UNIT - III

Representation of Knowledge: Knowledge representation issues, predicate logic- logic programming, semantic nets- frames and inheritance, representing knowledge using rules. Reasoning under uncertainty, review of probability, Bayes' probabilistic interferences and dempster shafer theory.

UNIT - IV

Logic concepts: First order logic, Inference in first order logic, propositional vs. first order inference, unification & lifts, forward chaining, Backward chaining, Resolution, Learning from observation Inductive learning, Decision trees, Explanation based learning, Reinforcement Learning.

UNIT - V

Expert Systems: Architecture of expert systems, Roles of expert systems – Knowledge Acquisition Meta knowledge Heuristics. Typical expert systems – MYCIN, DART, XCON: Expert systems shells.

ADVANCED DATA STRUCTURES AND ALGORITHM ANALYSIS

Course Objectives

- To provide knowledge on advance data structures frequently used in Computer Science domain.
- To develop skills in algorithm design techniques popularly used.
- To understand the use of various data structures in the algorithm design.

Course Outcomes

Upon successful completion of the course, the students will be able to

- analyze the space and time complexity of algorithms and implement operations on AVL trees.
- implement graph traversal algorithms and perform operations on heap trees.
- apply divide and conquer and greedy methods to design solutions in practical applications.
- find optimal solution to the problems using dynamic programming.
- construct solutions to the problems using backtracking or branch and bound & explain the foundational concepts of NP-hard and NP-complete problems.

Course Content

UNIT – I:

Introduction: Algorithm Analysis, Space and Time Complexity analysis, Asymptotic Notations.

AVL Trees : Creation, Insertion, Deletion operations and applications

UNIT – II:

Heap Trees (Priority Queues): Min and Max Heaps, Operations and Applications

Graphs: Terminology, Representations, Basic Search and Traversals.

UNIT – III:

Divide and Conquer: The General Method, Quick Sort, Merge Sort, Strassen's matrix multiplication.

Greedy Method: General Method, Job Sequencing with deadlines, Knapsack Problem, Minimum cost spanning trees, Single Source Shortest Paths

UNIT – IV:

Dynamic Programming: General Method, All pairs shortest paths, Single Source Shortest Paths – General Weights (Bellman Ford Algorithm), 0/1 Knapsack, Travelling Salesperson problem.

UNIT – V:

Backtracking: General Method, 8-Queens Problem, Sum of Subsets problem, Graph Coloring.

Branch and Bound: The General Method, 0/1 Knapsack Problem, Travelling Salesperson problem.

NP Hard and NP Complete Problems: Basic Concepts, Cook's theorem

OBJECT ORIENTED PROGRAMMING THROUGH JAVA

Course Objectives

1. Understand the fundamentals of Java programming and object-oriented programming concepts.
2. Apply object-oriented principles, inheritance, exception handling, multithreading, and Java APIs to develop applications.
3. Develop database-driven and GUI-based applications using Java technologies.

Course Learning Outcomes

After successful completion of the course, students will be able to:

1. Develop Java applications using object-oriented concepts, control structures, arrays, and standard libraries.
2. Apply inheritance, interfaces, packages, exception handling, multithreading, and file handling to build robust Java applications.
3. Design database and GUI applications using JDBC, JavaFX, and Java APIs.

Course Content

UNIT I

Introduction to Java and OOP

Object-oriented programming concepts and principles, Java program structure, data types, variables, constants, type casting, operators, control statements, looping statements, formatted output, static and final keywords.

UNIT II

Classes and Objects

Classes and objects, class members, constructors, access modifiers, method overloading and overriding, nested classes, this keyword, static and final methods, passing arguments, recursive methods.

UNIT III

Arrays, Inheritance and Interfaces

One-dimensional, two-dimensional and multidimensional arrays, inheritance, types of inheritance, super keyword, method overriding, dynamic method dispatch, abstract classes, interfaces, multiple interfaces, nested interfaces.

UNIT IV

Packages, Exception Handling and Java I/O

Packages and Java libraries, importing packages, class path, wrapper classes, exception handling, try, catch, finally, throw and throws, checked and unchecked exceptions, Java I/O streams, byte streams, character streams, file handling.

UNIT V

Advanced Java Programming

String class and string manipulation, multithreading, thread lifecycle, synchronization, inter-thread communication, JDBC architecture, database connectivity, Result Set, JavaFX, GUI components, event handling, layouts.

ADVANCED DATA STRUCTURES AND ALGORITHMS LAB

Course Objectives

- To acquire practical skills in constructing and managing Data structures.
- To apply the popular algorithm design methods in problem-solving scenarios.

Course Outcomes

Upon successful completion of the course, the students will be able to

- perform operations on AVL trees, Heap Trees and Graphs.
- apply divide and conquer technique to sort the elements using Quick sort and Merge sort.
- design and analyze the time complexity of Greedy method to solve single source shortest path problem and job sequencing with deadlines.
- solve problems using dynamic programming, back tracking, branch and bound techniques.

Experiments Covering the Topics:

- Operations on AVL trees, Heap Trees
- Graph Traversals
- Sorting techniques
- Shortest path algorithms
- 0/1 Knapsack Problem
- Travelling Salesperson problem
- N-Queens Problem
- Job Sequencing

List of Experiments

Perform any 10 of the following Experiments

1. Construct an AVL tree for a given set of elements which are stored in a file. And implement insert and delete operation on the constructed tree. Write contents of tree into a new file using in-order.
2. Construct Min and Max Heap using arrays, delete any element and display the content of the Heap.
3. Implement BFT and DFT for given graph, when graph is represented by
 - a) Adjacency Matrix
 - b) Adjacency Lists
4. Implement Quick sort and observe the execution time for various input sizes (Average, Worst and Best cases).
5. Implement Merge sort and observe the execution time for various input sizes (Average, Worst and Best cases).
6. Implement Knapsack problem using Greedy Method
7. Compare the performance of Single Source Shortest Paths using Greedy method when the graph is represented by adjacency matrix and adjacency lists.
8. Implement Job sequencing with deadlines using Greedy strategy.
9. Write a program to solve 0/1 Knapsack problem Using Dynamic Programming.
10. Implement N-Queens Problem Using Backtracking.
11. Use Backtracking strategy to solve 0/1 Knapsack problem.
12. Implement Travelling Sales Person problem using Branch and Bound approach.

OBJECT ORIENTED PROGRAMMING THROUGH JAVA LAB**Course Objectives**

- To practice object oriented programming in the Java programming language
- To implement Classes, Objects, Methods, Inheritance, Exception, Runtime Polymorphism, User defined Exception handling mechanism
- To illustrate inheritance, Exception handling mechanism, JDBC connectivity
- To construct Threads, Event Handling, implement packages, JavaFX GUI

Course Outcomes

Upon successful completion of the course, the students will be able to

- apply object oriented concepts in java programs.
- demonstrate inheritance and polymorphism concepts.
- implement user defined exceptions and multi-tasking applications.
- develop GUI, JDBC and event based applications.

Experiments covering the Topics:

- Object Oriented Programming fundamentals-data types, control structures
- Classes, methods, objects, Inheritance, polymorphism,
- Exception handling, Threads, Packages, Interfaces
- Files, I/O streams, JavaFX GUI

List of Experiments:**Exercise-1:**

- Write a JAVA program to display default value of all primitive data type of JAVA
- Write a JAVA program that display the roots of a quadratic equation $ax^2+bx+c=0$.
- Calculate the discriminate D and basing on value of D, describe the nature of root.

Exercise-2

- Write a JAVA program to search for an element in a given list of elements using binary search mechanism.
- Write a JAVA program to sort for an element in a given list of elements using bubble sort
- Write a JAVA program using String Buffer to delete, remove character.

Exercise-3

- Write a JAVA program to implement class mechanism. Create a class, methods and invoke them inside main method.
- Write a JAVA program implement method overloading.
- Write a JAVA program to implement constructor.
- Write a JAVA program to implement constructor overloading.

Exercise-4

- Write a JAVA program to implement single Inheritance
- Write a JAVA program to implement multilevel Inheritance
- Write a JAVA program for abstract class to find areas of different shapes

Exercise-5

- Write a JAVA program give example for —super| keyword.
- Write a JAVA program to implement Interface. What kind of Inheritance can be achieved?
- Write a JAVA program that implements Runtime polymorphism

Exercise-6

- Write a JAVA program that describes exception handling mechanism
- Write a JAVA program Illustrating multiple catch clauses
- Write a JAVA program for creation of Java Built-in Exceptions
- Write a JAVA program for creation of user defined Exception

11/7/2026
22/10/2026
07/12/2026
07/12/2026

Exercise-7

- a) Write a JAVA program that creates threads by extending Thread class. First thread display —Good Morning|| every 1 sec, the second thread displays —Hello|| every 2 seconds and the third display —Welcome|| every 3 seconds, (Repeat the same by implementing Runnable)
- b) Write a program illustrating isAlive and join()

Exercise-8

- a) Write a JAVA Program to illustrate Daemon Threads.
- b) Write a JAVA program to implement Producer Consumer Problem

Exercise- 9

- a) Write a JAVA program that import and use the user defined packages
- b) Without writing any code, build a GUI that display text in label and image in an Image View (use JavaFX)
- c) Build a Tip Calculator apposing several JavaFX components and learn how to respond to user interactions with the GUI

Exercise- 10

- a) Write a JAVA program that connects to a database using JDBC
- b) Write a JAVA program to connect to a database using JDBC and insert values into it.
- c) Write a JAVA program to connect to a database using JDBC and delete values from it

PYTHON PROGRAMMING
(Skill Enhancement Course)

Course Objectives

- To introduce core programming concepts of python programming language.
- To demonstrate about python data structures like lists, tuples, sets and dictionaries.
- To impart knowledge of implementing functions, modules, and file handling methods in python programming and analyzing data sets using python libraries.

Course Outcomes

Upon successful completion of the course, the students will be able to

- demonstrate the fundamental concepts of python and use of control flow statements to write effective and readable code.
- develop python programs including functions, strings and lists for efficient problem solving.
- make use of python data structures for efficient data handling, and apply relevant methods to manipulate and retrieve data in python programs.
- apply object-oriented concepts to develop reusable code.
- apply NumPy for numerical computations and evaluate pandas for data analysis in python.

UNIT - I:

History of Python Programming Language, Thrust Areas of Python, Installing Anaconda Python Distribution, Installing and Using Jupyter Notebook.

Parts of Python Programming Language: Identifiers, Keywords, Statements and Expressions, Variables, Operators, Precedence and Associativity, Data Types, Indentation, Comments, Reading Input, Print Output, Type Conversions, the type() Function and Is Operator, Dynamic and Strongly Typed Language.

Control Flow Statements: if statement, if-else statement, if...elif...else, Nested if statement, while Loop, for Loop, continue and break Statements, Catching Exceptions Using try and except Statement.

Sample Experiments:

1. Write a program to find the largest element among three Numbers.
2. Write a Program to display all prime numbers within an interval
3. Write a program to swap two numbers without using a temporary variable.
4. Demonstrate the following Operators in Python with suitable examples.
i) Arithmetic Operators ii) Relational Operators iii) Assignment Operators iv) Logical Operators v) Bit wise Operators vi) Ternary Operator vii) Membership Operators viii) Identity Operators
5. Write a program to add and multiply complex numbers
6. Write a program to print multiplication table of a given number.

UNIT-II:

Functions: Built-In Functions, Commonly Used Modules, Function Definition and Calling the function, return Statement and void Function, Scope and Lifetime of Variables, Default Parameters, Keyword Arguments, *args and **kwargs, Command Line Arguments.

11/7/2026
22/10/2026
09/11/2026
09/11/2026

Strings: Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, Formatting Strings.

Lists: Creating Lists, Basic List Operations, Indexing and Slicing in Lists, Built-In Functions Used on Lists, List Methods, del Statement.

Sample Experiments:

1. Write a program to define a function with multiple return values.
2. Write a program to define a function using default arguments.
3. Write a program to find the length of the string without using any library functions.
4. Write a program to check if the substring is present in a given string or not.
5. Write a program to perform the given operations on a list:
i. addition ii. insertion iii. slicing
6. Write a program to perform any 5 built-in functions by taking any list.

UNIT - III:

Dictionaries: Creating Dictionary, Accessing and Modifying key:value Pairs in Dictionaries, Built-In Functions Used on Dictionaries, Dictionary Methods, del Statement.

Tuples and Sets: Creating Tuples, Basic Tuple Operations, tuple() Function, Indexing and Slicing in Tuples, Built-In Functions Used on Tuples, Relation between Tuples and Lists, Relation between Tuples and Dictionaries, Using zip() Function, Sets, Set Methods, Frozen set.

Sample Experiments:

1. Write a program to create tuples (name, age, address, college) for at least two members and concatenate the tuples and print the concatenated tuples.
2. Write a program to count the number of vowels in a string (No control flow allowed).
3. Write a program to check if a given key exists in a dictionary or not.
4. Write a program to add a new key-value pair to an existing dictionary.
5. Write a program to sum all the items in a given dictionary.

UNIT - IV:

Files: Types of Files, Creating and Reading Text Data, File Methods to Read and Write Data, Reading and Writing Binary Files, Pickle Module, Reading and Writing CSV Files, Python os and os.path Modules.

Object-Oriented Programming: Classes and Objects, Creating Classes in Python, Creating Objects in Python, Constructor Method, Classes with Multiple Objects, Class Attributes Vs Data Attributes, Encapsulation, Inheritance, Polymorphism.

Sample Experiments:

1. Write a program to sort words in a file and put them in another file. The output file should have only lower-case words, so any upper-case words from source must be lowered.
2. Python program to print each line of a file in reverse order.
3. Python program to compute the number of characters, words and lines in a file.
4. Write a program to create, display, append, insert and reverse the order of the items in the array.
5. Write a program to add, transpose and multiply two matrices.
6. Write a Python program to create a class that represents a shape. Include methods to calculate its area and perimeter. Implement subclasses for different shapes like circle, triangle, and square.

11/7/2026
22/11/2026
28/11/2026
28/11/2026

UNIT - V:

Introduction to Data Science: Functional Programming, JSON and XML in Python, NumPy with Python, Pandas.

Sample Experiments:

1. Python program to check whether a JSON string contains complex object or not.
2. Python Program to demonstrate NumPy arrays creation using array() function.
3. Python program to demonstrate use of ndim, shape, size, dtype.
4. Python program to demonstrate basic slicing, integer and Boolean indexing.
5. Python program to find min, max, sum, cumulative sum of array
6. Create a dictionary with atleast five keys and each key represent value as a list where this list contains atleast ten values and convert this dictionary as a pandas data frame and explore the data through the data frame as follows:
 - a) Apply head () function to the pandas data frame
 - b) Perform various data selection operations on Data Frame
7. Select any two columns from the above data frame, and observe the change in one attribute with respect to other attribute with scatter and plot operations in matplotlib

Four handwritten signatures in blue ink, each followed by a date stamp '07/5/2026'.

ENVIRONMENTAL SCIENCE

(Audit Course)

Course Objectives

- To impart basic knowledge about the environment and natural resources.
- To develop an attitude of concern for biodiversity conservation and ecosystems.
- To acquire knowledge and skills on environmental pollution control.

Course Outcomes

Upon successful completion of the course, the students will be able to

- create awareness among the people in protection of environment and natural resources.
- analyze structure and functional attributes of an ecosystem and biodiversity conservation.
- identify the sources of environmental pollution, assess their effects and suggest suitable control measures.
- adopt sustainable management practices for various environmental issues.
- recognize the relationship between population growth and health.

Course Content

UNIT - I

Multidisciplinary Nature of Environmental Studies: Definition, Scope and Importance - Need for Public Awareness.

Natural Resources: Renewable and non-renewable resources - Natural resources and associated problems - Forest resources: Use and over - exploitation, deforestation, case studies - Timber extraction - Mining, dams and other effects on forest and tribal people - Water resources: Use and over utilization of surface and ground water - Floods, drought, conflicts over water, dams - benefits and problems - Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies - Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources.

UNIT - II

Ecosystems: Concept of an ecosystem - Structure and function of an ecosystem - Producers, consumers and decomposers - Energy flow in the ecosystem - Ecological succession - Food chains, food webs and ecological pyramids - Introduction, types, characteristic features, structure and function of the following ecosystem:

- a. Forest ecosystem.
- b. Grassland ecosystem
- c. Desert ecosystem
- d. Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Biodiversity And Its Conservation: Introduction and Definition: genetic, species and ecosystem diversity - Bio-geographical classification of India - Value of biodiversity: consumptive use, Productive use social, ethical, aesthetic and option values - Biodiversity at global, national and local levels - India as a mega-diversity nation - Hot-spots of biodiversity - Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts - Endangered and endemic species of India - Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

11/7/2026
22/10/2026
07/12/2026
07/12/2026

UNIT - III

Environmental Pollution: Definition, causes, effects and control measures of:

- a. Air pollution
- b. Water pollution
- c. Soil pollution
- d. Marine pollution
- e. Noise pollution
- f. Thermal pollution
- g. Nuclear hazards

Solid Waste Management: Causes, effects and control measures of urban and industrial wastes - Role of an individual in prevention of pollution - Pollution case studies - Disaster management: floods, earthquake, cyclone and landslides.

UNIT - IV

Social Issues and the Environment: From Unsustainable to Sustainable development - Urban problems related to energy - Water conservation, rain water harvesting, watershed management - Resettlement and rehabilitation of people, its problems and concerns. Case studies - Environmental ethics: Issues and possible solutions - Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case Studies - Wasteland reclamation - Consumerism and waste products - Environment Protection Act - Air (Prevention and Control of Pollution) Act - Water (Prevention and Control of Pollution) Act - Wildlife Protection Act - Forest Conservation Act - Issues involved in enforcement of environmental legislation - Public awareness.

UNIT - V

Human Population and The Environment: Population growth, variation among nations. Population explosion - Family Welfare Programmes - Environment and human health - Human Rights - Value Education - HIV/AIDS - Women and Child Welfare - Role of Information Technology in Environment and human health - Case studies.

Field Work: Visit to a local area to document environmental assets river/forest grassland/hill/mountain - Visit to a local polluted site-Urban/Rural/Industrial/Agricultural Study of common plants, insects, and birds - river, hill slopes, etc.

OPTIMIZATION TECHNIQUES**Course Objective**

- To find the best feasible solution to an optimization problem within given constraints to improve efficiency, performance, cost-effectiveness, or other desired outcomes in various engineering disciplines.

Course Outcomes

Upon successful completion of this course, the student should be able to

- formulate an optimization problem, and apply the methods such as Lagrange multipliers and Kuhn-Tucker conditions to find an optimal solution.
- apply classical optimization techniques to find an optimal solution.
- solve transportation problems first by initial solution methods and test for optimality in balanced transportation problems, addressing special cases.
- employ gradient and non-gradient methods to solve non-linear optimization problems, incorporating penalty functions to find an optimal solutions.
- utilize dynamic programming technique to inventory control, production planning, engineering design problems etc. to get an optimal solution.

Course Content**UNIT I: Introduction and Classical Optimization Techniques**

Statement of an optimization problem, design vector, design constraints, constraint surface, objective function, objective function surfaces, and classification of optimization problems. Classical optimization techniques: single variable optimization, multi variable optimization without constraints, necessary and sufficient conditions for minimum/maximum, multivariable optimization with equality constraints. Solution by method of Lagrange multipliers, multivariable optimization with inequality constraints, Kuhn – Tucker conditions.

UNIT II: Linear Programming

Standard form of a linear programming problem, geometry of linear programming problems, definitions and theorems, solution of a system of linear simultaneous equations, pivotal reduction of a general system of equations, motivation to the simplex method.

UNIT III: Transportation Problem

Finding initial basic feasible solution by north – west corner rule, least cost method and Vogel's approximation method, testing for optimality of balanced transportation problems, Special cases in transportation problem.

UNIT IV: Nonlinear Programming

Unconstrained cases, One – dimensional minimization methods: Classification, Fibonacci method, Univariate method, steepest descent method. Constrained cases– Characteristics of a constrained problem, Classification, Basic approach of Penalty Function method, Basic approaches of Interior and Exterior penalty function methods.

11/7/2026

PROBABILITY AND STATISTICS

Course Objectives

- To familiarize the students with the foundations of probability and statistical methods
- To impart probability concepts and statistical methods in various applications of engineering

Course Outcomes

Upon successful completion of this course, the student should be able to

- classify the concepts of data science and its importance
- interpret the association of characteristics through correlation and regression tools
- apply discrete and continuous probability distributions
- construct sampling distributions, confidence intervals and to find maximum error of estimates for population parameters.
- apply the inference tests when the sample data is large and/or small.

Course Content

Unit – I: Descriptive statistics and methods for data science:

Data science – Statistics Introduction – Population vs Sample –Collection of data – primary and secondary data – Type of variable: dependent and independent Categorical and Continuous variables – Data visualization – Measures of Central tendency – Measures of Variability – Skewness – Kurtosis.

UNIT – II: Correlation and Regression:

Correlation – Correlation coefficient – Rank correlation.

Linear Regression: Straight line – Multiple Linear Regression - Regression coefficients and properties – Curvilinear Regression: Parabola – Exponential – Power curves.

UNIT – III: Probability and Distributions:

Probability– Conditional probability and Baye's theorem – Random variables – Discrete and Continuous random variables – Distribution functions – Probability mass function, Probability density function and Cumulative distribution functions – Mathematical Expectation and Variance – Binomial, Poisson, Uniform and Normal distributions.

UNIT – IV: Sampling Theory:

Introduction – Population and Samples – Sampling distribution of Means and Variance (definition only)

– Point and Interval estimations – Maximum error of estimate – Central limit theorem (without proof)

– Estimation using t, χ^2 and F-distributions.

UNIT – V: Tests of Hypothesis:

Introduction – Hypothesis – Null and Alternative Hypothesis – Type I and Type II errors – Level of significance – One tail and two-tail tests – Test of significance for large samples and Small Samples:

Single and difference of means – Single and two proportions – Student's t- test, F-test and χ^2 -test.

MACHINE LEARNING**Course Objectives**

1. Understand the fundamentals, paradigms, and workflow of Machine Learning.
2. Learn supervised and unsupervised learning techniques for classification, regression, and clustering.
3. Apply machine learning algorithms to solve real-world prediction and data analysis problems.

Course Learning Outcomes

After successful completion of the course, students will be able to:

1. Explain machine learning concepts, feature engineering, and model evaluation techniques.
2. Apply classification, regression, and clustering algorithms to solve machine learning problems.
3. Analyze and evaluate the performance of machine learning models for real-world applications.

UNIT I**Introduction to Machine Learning**

Evolution of machine learning, learning paradigms, supervised, unsupervised, and reinforcement learning, machine learning workflow, data acquisition, feature engineering, data representation, model selection, model training, model evaluation, prediction, search and learning, benchmark datasets.

UNIT II**Modeling and Feature Engineering**

Model selection, model training, model representation and interpretability, model evaluation, performance improvement, hyperparameter tuning, feature transformation, feature selection, feature engineering techniques.

UNIT III**Classification Algorithms**

Bayes theorem, Naïve Bayes, Bayesian belief networks, classification process, k-Nearest Neighbor (KNN), Decision Trees, Random Forest, Support Vector Machines (SVM).

UNIT IV**Regression Techniques**

Linear regression, multiple linear regression, polynomial regression, logistic regression, regression assumptions, regression analysis, performance metrics, maximum likelihood estimation.

UNIT V**Unsupervised Learning**

Clustering concepts, partitioning methods, K-Medoids, hierarchical clustering, DBSCAN, clustering evaluation, association rule mining, Apriori algorithm, applications of unsupervised learning.

DATABASE MANAGEMENT SYSTEMS**Course Objectives**

1. Understand the fundamental concepts, architecture, and data models of database management systems.
2. Learn relational database design, SQL, normalization, and transaction management techniques.
3. Apply database concepts to design, implement, and manage efficient, secure, and reliable database systems.

Course Learning Outcomes

After successful completion of the course, students will be able to:

1. Explain database concepts, ER modeling, relational databases, and SQL operations.
2. Design relational databases using normalization, integrity constraints, and indexing techniques.
3. Apply transaction management, concurrency control, and recovery mechanisms in database applications.

UNIT I**Introduction to Database Systems**

Database systems, characteristics, database users, database applications, three-schema architecture, data independence, database system structure, Entity Relationship (ER) model, entities, attributes, entity sets, relationships, superclass and subclass, inheritance, specialization, generalization, ER diagrams.

UNIT II**Relational Model and Basic SQL**

Relational model, domains, attributes, tuples, relations, NULL values, domain constraints, key constraints, integrity constraints, relational schema, SQL data types, DDL commands (CREATE, ALTER), DML commands (INSERT, UPDATE, DELETE).

UNIT III**SQL and Relational Queries**

SQL queries, SELECT and PROJECT operations, WHERE clause, arithmetic and logical operators, SQL functions (date, numeric and string), nested queries, subqueries, grouping, aggregation, ordering, joins, views (updatable and non-updatable), relational set operations, implementation of integrity constraints.

UNIT IV**Database Design and Normalization**

Functional dependencies, schema refinement, normalization, First Normal Form (1NF), Second Normal Form (2NF), Third Normal Form (3NF), Boyce-Codd Normal Form (BCNF), Fourth Normal Form (4NF), Fifth Normal Form (5NF).

UNIT V**Transaction Management and Indexing**

Transaction concepts, transaction states, ACID properties, serializability, isolation, lock-based and timestamp based concurrency control, deadlocks, recovery and atomicity, B+ trees, hash-based indexing.

Four handwritten signatures and dates are present at the bottom of the page. From left to right: a signature dated 7/5/26, a signature dated 07/01/26, a signature dated 07/5/2026, and a signature dated 7/5/2026.

DIGITAL LOGIC AND COMPUTER ORGANIZATION

Course Objectives

- To provide students with a comprehensive understanding of digital logic design principles and computer organization fundamentals.
- To describe memory hierarchy concepts.
- To explain input/output (I/O) systems and their interaction with the CPU, memory, and peripheral devices.

Course Content

UNIT – I:

Data Representation: Binary Numbers, Fixed Point representation. Floating Point representation. Number base conversions, Octal and Hexadecimal Numbers, Complements, Signed binary numbers, Binary codes

UNIT – II:

Basic Structure of Computers: Computer Types, Functional units, Basic operational concepts, Bus structures, Software, Performance, multiprocessors and multi computers, Computer Generations.

Register Transfer and Micro operations: Register transfer language, register transfer, Bus & memory Transfers, Arithmetic micro-operations, logic micro-operations, Shift micro-operations, Arithmetic Logic Shift Unit.

UNIT – III:

Computer Arithmetic: Addition and Subtraction of Signed Numbers, Design of Full Adders, Multiplication of Positive Numbers, Signed-operand Multiplication, Integer Division, Floating-Point Numbers and Operations.

UNIT – IV:

The Memory Organization: Basic Concepts, Semiconductor RAM Memories, Read-Only Memories, Speed, Size and Cost, Cache Memories, Performance Considerations, Virtual Memories, Memory Management Requirements, Secondary Storage.

UNIT – V:

Input / Output Organization: Accessing I/O Devices, Interrupts, Processor Examples, Direct Memory Access, Buses- synchronous bus, asynchronous bus.

Machine Instructions and Programs: Addressing Modes, Basic Input/output Operations, Stacks and Queues, Subroutines, Additional Instructions.

AI & ML LAB

Course Objective

- To make use of data sets in implementing the machine learning algorithms

Course Outcomes

Upon successful completion of the course, the students will be able to

- design python programs for various learning algorithms.
- identify and apply machine Learning algorithms with appropriate data sets to solve real world problems.

List of Experiments

Perform any 10 of the following Experiments

1. Compute Central Tendency Measures: Mean, Median, Mode Measure of Dispersion: Variance, Standard Deviation.
2. Apply the following Pre-processing techniques for a given dataset.
a) Attribute selection b) Handling Missing Values c) Discretization d) Elimination of Outliers
3. Apply KNN algorithm for classification and regression
4. Demonstrate decision tree algorithm for a classification problem and perform parameter tuning for better results
5. Demonstrate decision tree algorithm for a regression problem
6. Apply Random Forest algorithm for classification and regression
7. Demonstrate Naïve Bayes Classification algorithm.
8. Apply Support Vector algorithm for classification
9. Demonstrate simple linear regression algorithm for a regression problem
10. Apply Logistic regression algorithm for a classification problem
11. Demonstrate Multi-layer Perceptron algorithm for a classification problem
12. Implement the K-means algorithm and apply it to the data you selected. Evaluate performance by measuring the sum of the Euclidean distance of each example from its class center. Test the performance of the algorithm as a function of the parameters K.
13. Demonstrate the use of Fuzzy C-Means Clustering
14. Demonstrate the use of Expectation Maximization based clustering algorithm.

27/5/2026

DATABASE MANAGEMENT SYSTEMS LAB**Course Objectives**

- To populate and query a database using SQL (DDL,DML) Commands.
- To enforce integrity constraints on a database and to write queries using the concepts of SQL and PL/SQL.

Course Outcomes

Upon successful completion of the course, the students will be able to

- develop simple and complex queries using SQL.
- write PL/SQL programs including procedures, functions, cursors and triggers.

Experiments covering the topics

- DDL, DML, DCL commands.
- Queries, nested queries, built-in functions.
- PL/SQL programming-control structures.
- Procedures, Functions, Cursors, Triggers.

List of Experiments**Perform any 10 experiments in the following**

1. Draw and Explain ER diagram for the following company database.

Note: Please refer the above Company relational database schema to address the following questions.

2. Write appropriate SQL DDL statements to create tables for Company database.
3. Write appropriate SQL statements for specifying key and referential integrity constraints.
(Use PRIMARY KEY, FOREIGN KEY and UNIQUE).
4. Write appropriate SQL statements to insert the data in to company relational database.
(Use various types of insertion statements)
5. Write appropriate SQL statements for for schema change (Use DROP and ALTER commands)
6. Write appropriate SQL DML statements to retrieve the **name** and **address** of all employees who work for the 'Research' department.

11/7/2026

 07/07/2026
 07/07/2026

7. Write appropriate SQL DML statements to retrieve all the attributes of an employee and attributes of Department in which He or She works for every Employee of the 'Research' Department.
8. Write appropriate SQL DML statements to retrieve all the details of employees whose address is in Machilipatnam.
9. Write appropriate SQL DML statements to find the sum of the salaries of all employees, the maximum salary, minimal salary and average salary.
10. Write appropriate SQL DML statements to find the names of employees who are working on both "Project A" and "Project B".
(Use SQL set operations like `INTERSECT`, `UNION`, and `EXCEPT` to accomplish these tasks.)
11. (a) **Create a View:** Write appropriate SQL statements to create a view named EmployeeSummary that displays the following information:
Emp_ID, Emp_Name, Dept_Name, Salary. The view should join the Employees table with the Departments table to include department names alongside employee details.
- (b) **Query the View:** Write an SQL query to select all employees with a salary greater than \$50,000 from the EmployeeSummary view.
- (c) **Update the View:** Write an SQL statement to update the EmployeeSummary view to include a calculated column for the number of years each employee has been with the company, rounded to the nearest integer. Assume the current date is used for calculation.
12. Create a database for any one of the case study.
 1. Student Attendance Management System.
 2. Student Information System.
 3. Fee Management System
 4. Student Placement Management System.

FULL STACK DEVELOPMENT-I (Skill Enhancement Course)

Course Objectives

The main objectives of the course is

- To make use of HTML elements and their attributes for designing static web pages
- To build a web page by applying appropriate CSS styles to HTML elements
- To experiment with JavaScript to develop dynamic web pages and validate forms

Course Outcomes

Upon successful completion of the course, the students will be able to

- design web pages using HTML and CSS
- develop dynamic web pages and perform form validations using javascript.

Course Content

Experiments covering the Topics:

- Lists, Links and Images
- HTML Tables, Forms and Frames
- HTML 5 and Cascading Style Sheets, Types of CSS
- Selector forms
- CSS with Color, Background, Font, Text and CSS Box Model
- Applying JavaScript - internal and external, I/O, Type Conversion
- JavaScript Conditional Statements and Loops, Pre-defined and User-defined Objects
- JavaScript Functions and Events
- Node.js

Sample Experiments

1. Lists, Links and Images

- a. Write a HTML program, to explain the working of lists.
Note: It should have an ordered list, unordered list, nested lists and ordered list in an unordered list and definition lists.
- b. Write a HTML program, to explain the working of hyperlinks using <a> tag and href, target Attributes.
- c. Create a HTML document that has your image and your friend's image with a specific height and width. Also when clicked on the images it should navigate to their respective profiles.
- d. Write a HTML program, in such a way that, rather than placing large images on a page, the preferred technique is to use thumbnails by setting the height and width parameters to something like to 100*100 pixels. Each thumbnail image is also a link to a full sized version of the image. Create an image gallery using this technique.

2. HTML Tables, Forms and Frames

- a. Write a HTML program, to explain the working of tables. (use tags: <table>, <tr>, <th>, <td> and attributes: border, rowspan, colspan)
- b. Write a HTML program, to explain the working of tables by preparing a timetable. (Note: Use <caption> tag to set the caption to the table & also use cell spacing, cell padding, border, rowspan, colspan etc.).

Handwritten signatures and dates at the bottom of the page, including dates like 7/5/2026 and 27/5/2026.

- c. Write a HTML program, to explain the working of forms by designing Registration form. (Note: Include text field, password field, number field, date of birth field, checkboxes, radio buttons, list boxes using <select>&<option> tags, <text area> and two buttons ie: submit and reset. Use tables to provide a better view).
- d. Write a HTML program, to explain the working of frames, such that page is to be divided into 3 parts on either direction. (Note: first frame image, second frame paragraph, third frame hyperlink. And also make sure of using —no frame|| attribute such that frames to be fixed).

3. HTML 5 and Cascading Style Sheets, Types of CSS

- a. Write a HTML program, that makes use of <article>, <aside>, <figure>, <figcaption>, <footer>, <header>, <main>, <nav>, <section>, <div>, tags.
- b. Write a HTML program, to embed audio and video into HTML web page.
- c. Write a program to apply different types (or levels of styles or style specification formats)-inline, internal, external styles to HTML elements. (identify selector, property and value).

4. Selector forms

- a. Write a program to apply different types of selector forms.
- b. Simple selector (element, id, class, group, universal).
- c. Combinator selector (descendant, child, adjacent sibling, general sibling)
- d. Pseudo-class selector
- e. Pseudo-element selector
- f. Attribute selector

5. CSS with Color, Background, Font, Text and CSS Box Model

- a. Write a program to demonstrate the various ways you can reference a color in CSS.
- b. Write a CSS rule that places a background image halfway down the page, tilting it horizontally. The image should remain in place when the user scrolls up or down.
- c. Write a program using the following terms related to CSS font and text:

i. font-size	ii. font-weight	iii. font-style
iv. text-decoration	v. text-transformation	vi. text-alignment
- d. Write a program, to explain the importance of CSS Box model using

i. Content	ii. Border	iii. Margin	iv. padding
------------	------------	-------------	-------------

6. Applying JavaScript - internal and external, I/O, Type Conversion

- a. Write a program to embed internal and external JavaScript in a web page.
- b. Write a program to explain the different ways for displaying output.
- c. Write a program to explain the different ways for taking input.
- d. Create a webpage which uses prompt dialogue box to ask a voter for his name and age. Display the information in table format along with either the voter can vote or not

7. JavaScript Pre-defined and User-defined Objects

- a. Write a program using document object properties and methods.
- b. Write a program using window object properties and methods.
- c. Write a program using array object properties and methods.
- d. Write a program using math object properties and methods.
- e. Write a program using string object properties and methods.

 11/7/2026
 11/7/2026
 11/7/2026
 11/7/2026

- f. Write a program using regex object properties and methods.
- g. Write a program using date object properties and methods.
- h. Write a program to explain user-defined object by using properties, methods, accessors, constructors and display.

8. JavaScript Conditional Statements and Loops

- a. Write a program which asks the user to enter three integers, obtains the numbers from the user and outputs HTML text that displays the larger number followed by the words —LARGER NUMBER in an information message dialog. If the numbers are equal, output HTML text as —EQUAL NUMBERS.
- b. Write a program to display week days using switch case.
- c. Write a program to print 1 to 10 numbers using for, while and do-while loops.
- d. Write a program to print data in object using for-in, for-each and for-of loops.
- e. Develop a program to determine whether a given number is an 'ARMSTRONG NUMBER' or not. [Eg: 153 is an Armstrong number, since sum of the cube of the digits is equal to the number i.e., $1^3 + 5^3 + 3^3 = 153$]
- f. Write a program to display the denomination of the amount deposited in the bank in terms of 100's, 50's, 20's, 10's, 5's, 2's & 1's. (Eg: If deposited amount is Rs.163, the output should be 1-100's, 1-50's, 1-10's, 1-2's & 1-1's)

9. Javascript Functions and Events

- a. Design a appropriate function should be called to display
 - Factorial of that number
 - Fibonacci series up to that number
 - Prime numbers up to that number
 - Is it palindrome or not
- b. Design a HTML having a text box and four buttons named Factorial, Fibonacci, Prime, and Palindrome. When a button is pressed an appropriate function should be called to display
 - Factorial of that number
 - Fibonacci series up to that number
 - Prime numbers up to that number
 - Is it palindrome or not
- c. Write a program to validate the following fields in a registration page
 - Name (start with alphabet and followed by alphanumeric and the length should not be less than 6 characters)
 - Mobile (only numbers and length 10 digits)
 - E-mail (should contain format like xxxxxxx@xxxxxx.xxx)

DESIGN THINKING AND INNOVATION

Course Objectives

- To develop a comprehensive understanding of design thinking, its history, principles, and application in various contexts, including product development and business innovation.
- To apply the design thinking process and tools to foster creativity, drive innovation, and address real-world challenges in both social and business settings.

Course Outcomes

Upon successful completion of the course, the students will be able to

- analyse the elements and principles of design.
- implement the design thinking process (empathize, analyze, ideate, and prototype) to drive inventions and social innovations.
- analyse the difference between innovation and creativity, to foster innovation within organization.
- create a comprehensive product design by forming and solving problems, setting product strategies, values, planning, and specifications, and evaluating case studies for practical insights.
- apply design thinking principles to redefine business strategies and address business challenges.

Course Content

UNIT I: Introduction to Design Thinking

Introduction to elements and principles of design, basics of design-dot, line, shape, form as fundamental design components - Principles of design - Introduction to design thinking, history of design thinking, new materials in industry.

UNIT II: Design Thinking Process

Design thinking process (empathize, analyze, idea & prototype), implementing the process in driving inventions, design thinking in social innovations. Tools of design thinking - person, costumer, journey map, brain storming, product development

Activity: Every student presents their idea in three minutes, every student can present design process in the form of flow diagram or flow chart etc. Every student should explain about product development.

UNIT III: Innovation

Art of innovation, difference between innovation and creativity, role of creativity and innovation in organizations. Creativity to innovation. Teams for innovation, measuring the impact and value of creativity.

Activity: Debate on innovation and creativity, flow and planning from idea to innovation, debate on value-based innovation.

UNIT IV: Product Design

Problem formation, introduction to product design, product strategies, product value, product planning, product specifications. Innovation towards product design case studies.

Activity: Importance of modeling, how to set specifications, explaining their own product design.

UNIT V: Design Thinking in Business Processes

Design thinking applied in business & strategic Innovation, design thinking principles that redefine business – Business challenges: growth, predictability, change, maintaining relevance, extreme competition, standardization. Design thinking to meet corporate needs. Design thinking for startups. Defining and testing Business Models and Business Cases. Developing & testing prototypes.

Activity: How to market our own product, about maintenance, Reliability and plan for startup.
